INTRODUCTION

After damaging your front camera, you might feel intimidated to dig into the Samsung Galaxy Tab 4 8.0. Replacing the front camera will only require, a plastic opening tool, tweezers, muscle strength, and these easy to follow instructions. The replacement will be a breeze, but be sure not use *too* much force when prying the device open.

Step 1 — Rear Case

i Before disassembling your Samsung Galaxy Tab 4 8.0, be sure it is powered off.

- At the top of the tablet, nudge the blue plastic opening tool between the back plastic casing and the front panel's metal rim.

! Do not use excessive force when prying the clips, fastening the casing together, open because they can easily break.

Step 2

- Continue prying the blue plastic opening tool along the perimeter of the tablet to separate the back plastic casing from the front assembly panel.
- ⓘ As right-handers, we found it easiest to move clockwise and use more pressure around the corners to facilitate the process.
- ⓘ You might hear several popping noises caused by the plastic clips coming undone.

Step 3

- To avoid damaging the screen, gently set the tablet with the LCD screen faced down.
- Firmly grasp the back plastic casing and lift it away from the front assembly panel.

Step 4 — Front Facing Camera

- The front camera's ribbon cable is located just above the battery, slightly to the left.
- Carefully insert the flat end of the blue plastic opening tool under the connector at the end of the ribbon cable.

Step 5

- Slightly apply pressure and move the blue plastic opening tool downwards to pop the front camera's gold rectangular connector from its socket on the motherboard.

Step 6

- Squeeze the gold rectangular piece with the tweezers to gently lift it from its pit.

To reassemble your device, follow these instructions in reverse order.
